

AutoPrep™

Instantly e-enables ANY third-party documents for our premier Total eClose™ platform

AutoPrep can transform any standard document formatted as a PDF into a fully e-enabled document in seconds. Using artificial intelligence, OCR and machine learning technologies, AutoPrep scans and parses documents, locates all signature and notary regions, and then electronically tags them for eClosing. As a result, lenders and settlement service providers can use loan documents produced by virtually any document provider with our Total eClose solution.

Scan Documents

Find Signatures

Assign Signatures

Ready to eClose!

- Locates and identifies all applicable signature areas
- Detects and classifies documents requiring notary acknowledgment
- Finds and converts e-tags placed by other providers

- Integrated learning functionality eliminates repetitive corrections
- e-Enables documents in 10 seconds or less
- Web-service UI or comprehensive
- API available

Many lenders are tied to systems that don't produce e-enabled documents. That's a major eClosing roadblock. AutoPrep removes that roadblock instantly, making eClosing a whole lot easier!
